AUDIT

Technology Cost Optimization Audit

Nelson Pires · Fractional CIO / CTO · info@swpconsultant.ca

"We're spending a lot on IT. I'm not sure we're getting the value we should."

Technology budgets grow year over year — licenses are renewed by habit, vendors multiply, and the real cost of your stack becomes difficult to see. This audit gives you a complete, independent picture of your technology spend: what you're paying, what you're actually using, and where the savings and renegotiation opportunities are. The deliverable is a prioritized action plan your team can execute — not just a spreadsheet.

SCOPE

- Full vendor and software license inventory
- Contract terms and renewal schedule review
- Utilization analysis (active vs. idle tools)
- Spend benchmarking against comparable organizations
- Identification of redundancies and consolidation opportunities

DELIVERABLES

- Savings opportunity report with estimated impact
- Vendor consolidation recommendations
- Quick wins vs. longer-term action plan
- Renegotiation talking points for key contracts

Typical duration: 3–4 weeks

Scope and investment calibrated to your organization's size and context.
