

Cybersecurity Risk Advisory

Nelson Pires · Fractional CIO / CTO · info@swpconsultant.ca

"I know cybersecurity matters. But I don't know where our real blind spots are — or what to prioritize first."

Most organizations have security measures in place — but few have a clear executive-level picture of where the real gaps are, what the actual business risk is, and what to act on first. This engagement is not a deep technical audit. It is a structured conversation with leadership designed to surface the blind spots most likely to cause harm: the questions nobody is asking, the assumptions that have never been tested, and the quick wins that would meaningfully reduce exposure. The output is practical, prioritized, and actionable — without requiring a specialist team.

SCOPE

- Leadership interviews to surface assumptions and blind spots
- High-level review of current security practices and policies
- Identification of the highest-risk areas for the business
- Assessment of Loi 25 / regulatory awareness and readiness
- Discussion with IT team to validate and cross-check findings

DELIVERABLES

- Executive summary: blind spots and priority risk areas
- Recommended next steps with suggested ownership
- Briefing guide for presenting findings to the board
- Referral to specialist resources where deeper work is needed

Typical duration: 2–3 weeks

Scope and investment calibrated to your organization's size and context.
