M&A / TRANSACTION

IT Due Diligence

Nelson Pires · Fractional CIO / CTO · info@swpconsultant.ca

"We're acquiring a firm. I need to understand what we're actually inheriting on the technology side."

Technology surprises after a deal closes are among the most expensive outcomes in M&A. Legacy systems with hidden costs, contracts that don't transfer cleanly, undocumented infrastructure, and security gaps — these become your problem the moment the ink is dry. This engagement provides a fast, focused, independent IT assessment to inform deal negotiations, integration planning, and risk disclosure — on a timeline that works within the deal process.

SCOPE

- Systems and application inventory
- Infrastructure and cloud footprint
- Software licensing and contract transferability
- Technical debt and modernization requirements
- Security posture and compliance exposure
- IT team structure and key person dependencies

DELIVERABLES

- IT due diligence report
- Risk and liability summary (deal-ready format)
- Post-merger integration considerations
- Key questions for management Q&A

Typical duration: 3–5 weeks (timeline-sensitive)

Scope and investment calibrated to your organization's size and context.
